

TIA Quick Reference

Tech Install form • Depot Inventory • September 2026 • tia-mercy.com

TECH INSTALL FORM

I want to...	Do this
Log an install, move or hot swap	Service Type → scan serial → check auto-filled fields → Location (Facility) + Floor + Room → Submit
Send a removed printer to CORD	Removal → Location = Cord Moving and Storage → MercyID, Mfr, Model (Asset optional) → Submit
Bring a removed printer into my depot	Removal → Location = your EPDS depot → pick Depot Status → Asset, MercyID, Mfr, Model → Submit
Remove a printer going anywhere else	Removal → Location → Submit (recorded; no inventory change)
Log a device not in CMDDB	Type/scan Asset Tag, MercyID, Manufacturer, Model — TIA adds it on submit
Use a location not in the list	Location (Manual) + City / State / Zip (never for CORD or a depot)
Start over	Clear Form (can't be undone)

REMOVALS: THE LOCATION DECIDES WHAT HAPPENS

Location (pick from list)	Result in IMS	Also required
Cord Moving and Storage	Marked In Transit to CORD ; warehouse checks it in on arrival	MercyID, Mfr, Model
EPDS depot	Added to that depot as the Depot Status you pick: In Stock (ready) · In Maintenance (default — needs work) · Pending Transfer (next Ship Pallet)	Asset, MercyID, Mfr, Model
Anywhere else	Removal recorded; inventory unchanged	—

NOTICE UNDER THE SERIAL

You see	It means / do this
✓ Device found in CMDDB	Fields filled in — check them against the label; they stay editable
Not found in CMDDB	Enter the device details by hand
✓ Warehouse already has this device	Removal to CORD is still recorded; IMS inventory left as is — submit normally
X ...cannot be marked inbound to CORD	Already In Transit to CORD → don't re-file · At a depot → Ship Pallet · Decom / open claim / lease return → call warehouse
X ...cannot be added to [depot] inventory	Already recorded elsewhere — check the serial; if right, call warehouse
X ...at EPDS... In Maintenance / Pending Transfer	Depot tab → Edit → In Stock , then install
X ...at EPDS... In Transit	Wait until it's checked in at the depot
X ...at EPDS... Damaged In Transit	Don't install — warehouse resolves the claim in IMS

Submit grayed out? Read the red X notice — it says what's blocking and how to fix it.

DEPOT INVENTORY TAB

I want to...	Do this
See / find my depot's stock	Depot Inventory → pick your depot → search serial / asset / MercyID; tap a header to sort (LEASED = on lease)
Accept stock shipped to me	In Transit row → Check In → In Stock / In Maintenance
Report a shipment that arrived broken	In Transit row → Damaged → note + 📷 1–2 photos → Mark Damaged
Add a device I already have	+ Add Device → scan serial, confirm fields → Status → Add Device
Clinic device I can't install (damaged)	+ Add Device → Status = Damaged In Transit → 📷 photos → Add Device
Pull for repair / put back in stock	Row → Edit → In Maintenance / In Stock
Stage a device for the pallet	Row → Edit → Pending Transfer (purple badge) — undo: Edit back
Ship the pallet	📦 Ship Pallet → destination + MDM # (one for the pallet) → uncheck any staying → Ship Pallet
Ship just one device	Row → Ship to... → destination + MDM # → Ship Device
Count my depot against IMS	📋 Audit Depot → Full audit or Spot check → scan / paste / upload → Run Audit
Share the audit	Results → ✉ Send Report (Team Lead + warehouse) or ↓ Download CSV

DEPOT STATUSES

Status	Meaning	Action
In Transit	Shipped to the depot; not checked in	Check In (or Damaged)
In Stock	Good, available	Install; Edit → In Maintenance / Pending Transfer
In Maintenance	Being worked on; not available	Edit → In Stock when ready
Pending Transfer	Staged for the next outbound pallet	Ship Pallet on ship day; Edit back if a mistake
Damaged In Transit	Arrived broken; claim open in IMS	Nothing — warehouse resolves in IMS

AUDIT RESULTS

Result	Meaning → action
Matched	Scanned and IMS agrees → nothing to do
Needs attention	Here but In Transit / Pending Transfer / Damaged In Transit → check in, ship/un-stage, or leave for the claim
Missing	IMS says it's here, not scanned (Full audit only) → look for it; tell warehouse if gone
Expected inbound	In Transit to you, not arrived yet → not a problem
Found elsewhere	IMS has it at another depot / CORD / decom / open claim → tell the warehouse
Unknown to IMS	Not in IMS → check for a mis-scan; if real and yours, + Add Device

The audit **never changes inventory** — it only reports. Use **Spot check** unless you're counting the whole depot.

TIPS

- **Scan, don't type:** 📷 buttons on phones — iPhone scans live; Android takes a photo. A Bluetooth scanner is fastest.
- Always check auto-filled fields after a CMDB match. Choose CORD and depots from the Location (Facility) list. A leading "S" dropped from a scan is expected — the notice says so.
- **Feature missing on your phone after an update?** Close the TIA tab and reopen tia-mercy.com.
- **Broken device?** Flag it and add photos — better to open a claim than lose track of it.
- Inventory questions → CORD warehouse team. Sign-in / access → your TIA administrator. Full details: TIA Technician Guide (Help in the TIA menu).
